Jeyson Melecio Dagondon

AI-Native Workflow Automation | Registered Pharmacist (RPh) | Zoho CRM · Browser Automation

Cagayan de Oro City, Philippines · donjeysonofficial@gmail.com · github.com/anki-boi · anki-boi.github.io

Professional Summary

Built and run a 45+ script Tampermonkey and Chrome MV3 extension suite that cut a telehealth clinic's order handling from ~6 minutes to ~40 seconds across a Zoho CRM and seven pharmacy portals, returning 40-60 hours a month with human sign-off on every action. I build by directing AI coding agents: I set intent and constraints, have them adversarially review their own work, then own the final check against the real rendered output. Every change ships as a reviewed commit.

Key Skills

Python | Node/JavaScript | n8n | Browser Automation (Tampermonkey · Chrome MV3 Extensions) | Google Apps Script | LLM APIs (Anthropic · OpenAI) | Agent-Directed Development | MCP Tool Wiring | API Integration | Test Suites & Verification Gates | Git/GitHub | Supabase (Postgres) · SQLite | Linux/WSL2

Professional Experience

Medical Ops & Process Automation Specialist (contract), Colorado Medical Solutions April 2026 to October 2026

- Started as Medical Admin Assistant; promoted at the 3-month mark to own the automation layer, with a personal budget for AI APIs to keep improving team efficiency
- Built and maintain a 45+ script Tampermonkey userscript and Chrome MV3 extension suite automating profile verification, order-queue processing, tracking parsing and address validation across a Zoho CRM and seven pharmacy portals, with order handling down from ~6 minutes to ~40 seconds, human sign-off on every action by design
- Set the routing logic and decide what stays deterministic versus model-driven; regulated data is never handed to a model. Work the build loop end to end: agent-directed implementation, adversarial review, then a verification pass against the rendered output, because a script that reports success while producing the wrong artifact is exactly the failure mode this catches
- Self-hosted stack rather than rented inference: local model serving on own hardware (RTX 3090), Hermes agent orchestration, Pi and DeepSeek coding harnesses, so routine maintenance costs nothing per token

Automation & Algorithmic Systems (contract work + independent build) 2020 to 2023

- Automation support under a senior consultant: rebuilt manual e-commerce reporting into Excel VBA / n8n pipelines; designed 15+ Expert Advisors (MQL4/MQL5) with full risk management, validated on 99.9%-quality tick data

Projects

- **onlinejobs.ph-suite**, Python job-hunter suite with a web UI and 359 tests (public)
- **ojph-cleaner**, Node Chrome MV3 extension, 8 assert-based test files plus a repo-hygiene test that fails the build when the repo drifts from its own spec (public)
- **userscript-showcase**, scrubbed public mirror of the production suite: 40 scripts, identifier-clean and host-fictional, a code-reading showcase, not a runnable demo
- **Anki MCQ Importer**, Python + Gemini API pipeline turning study images into structured Anki MCQ decks
- **True-Anki-MCQ Note Template**, responsive Anki card template (HTML/CSS/JS), 15★ on GitHub

Tech Proficiency

- **Automation & AI:** agent-directed development, MCP tool wiring, Anthropic/OpenAI API integration; local model serving on own hardware (llama.cpp, vLLM, RTX 3090); health-endpoint and log monitoring, scheduled tasks and backups
- **Clinical & Compliance:** ADR reporting, GxP/cGMP, Zoho CRM

Education & Certifications

- **RPh, Professional Regulation Commission (PRC)**, Nov 2025, board rating 91.07%, License No. 0105469 · **BSc Pharmacy, Liceo de Cagayan University**, 2021-2025
- HIPAA Privacy & Security training · cGMP Compliance Training · Pharmacovigilance & ADR Reporting
- Remote: Windows 11 (Ryzen 5950X · 64GB · RTX 3090) + MacBook Pro M1 Pro · dual-ISP fiber + wireless · backup power sources · English: Duolingo practice 140-150
